saaud266@gmail.com | +91-770-273-5203 saudzubedi.com | linkedin.com/in/saudzubedi

Skills

Languages: JavaScript (ES6+), TypeScript

Tools & Technologies: ReactJS, Responsive Design, TailwindCSS, ShadCN, Data Visualization (ReCharts), Twilio (VIdeo calling, SMS Integration), ZATCA Integration

Work Experience

Arcgen Technologies, Hyderabad, India

Frontend Developer - 2 Years

- Vizzhy (Healthcare): Developed a healthcare web app using React.js, Redux, React Router, and Azure Al with automated speech recognition for voice commands and real-time chat system using Firebase for doctor-patient communication.
- **Wellyfe (Healthcare):** Created a patient-doctor portal using React.js, Redux, React Router, Twilio, and ReCharts with **real-time video conferencing** and automated SMS reminders for patients.
 - Transformed designs into responsive web pages and ensured quality maintenance across both healthcare applications.
- **Technologies:** React.js, Redux, React Router, Azure Al, Firebase, Twilio, React Charts, responsive design

Emvive, Hyderabad, India

Frontend Developer - 10 months

- Implemented ZATCA-compliant e-invoicing SaaS system by using Zatca SDK reducing invoice rejections, and approval.
- Consolidated multi-client AWS instances into one auto-scaling environment, cutting hosting costs from ₹30,000 to ₹3,000 per month (90% savings).
- Developed a no-code, drag-and-drop form builder that decreased form creation from days to just minutes, which helped developers focus on other important development.
- Led a team of six developers ensuring 100% on-time feature delivery and zero production downtime.
- Created a comprehensive Sales and purchasing modules for initiating invoices, managing inventory, sales, and purchasing.
- **Technologies:** JavaScript, TypeScript, ReactJS, HTML5, CSS3, Redux/Context API, RESTful APIs

Education

Bachelor of Computer Applications (BCA) Osmania University, Hyderabad May 2025

Projects

Dynamic Form Builder

Developed a comprehensive drag-and-drop form builder using React, dnd-kit, and Context API, featuring 15+ reusable block components (text fields, dropdowns, tabs, validation logic) that eliminates manual form coding and reduces development time by 80%. Built reusable droppable area components with custom logic to handle complex drag-and-drop state management and block rearrangement. Successfully created complex forms including invoicing systems, demonstrating the platform's versatility from simple contact forms to enterprise-level applications.
